## **DETAILED ACTION**

### ***Terminal Disclaimer***

1. The terminal disclaimer filed on 8/26/05 disclaiming the terminal portion of any patent granted on this application, which would extend beyond the expiration date of Patent No. 6,658,257 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### ***Response to Arguments***

2. Applicant's arguments with respect to claim 14 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 112***

3. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With regard to claim 14, it is not clear how "within each allotted frequency bands, allotting non-adjacent communication frequency bands being a communication frequency band which is the highest and a communication frequency band which is the lowest in the frequency band corresponding to that carrier, to low power communications" is carried out. This makes the claim indefinite as it is not clear how the non-adjacent communication frequency band, which is the highest and a communication frequency band which is the lowest is allotted to low power communications.

***Allowable Subject Matter***

4. Claims 1-13 and 15-24 are allowed.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dent (6,061,568) discloses a method for mitigating intermodulation distortion between frequency bands through allocation of different frequency bands to high and low power communications. Hamabe (6,574,456) discloses a method for preventing interference of adjacent frequencies in a cellular communication system. Bruckert et al. (5,430,761) discloses the use of frequency partitioning assign frequency spectrum based on power level.
